The evaluation of remedial alternatives and the Preferred Alternative in the attached Proposed Plan were modified as requested by the Department of Energy, Rocky Flats Field Office (DOE, RFFO) during the October 31, 1995, meeting with Kaiser-Hill, L.L.C., DOE, RFFO, and Rocky Mountain Remediation Services, L.L.C. (RMRS). The Proposed Plan discussed in the October 31 meeting had been prepared based upon previous OU 1 Proposed Plans submitted by the DOE, RFFO to the Environmental Protection Agency and the Colorado Department of Public Health and Environment. The proposed plans previously submitted by DOE, RFFO supported different Preferred Alternatives than the attached Proposed Plan. Within the October 31 meeting the DOE, RFFO requested that the Proposed Plan be modified to better support the Preferred Alternative (Alternative 5: Soil Excavation with Groundwater Pumping) that was chosen by the OU 1 Dispute Resolution Committee on August 25, 1995.

CONTROL	X	X
ECRD/080		

In support of DOE, RFFO's request, the excavation evaluated in the attached Proposed Plan has an assumed areal extent of 50 feet by 50 feet. The excavation evaluated as part of Alternative 5 in the Corrective Measures Study/Feasibility Study for OU 1 has an assumed areal extent of 200 feet by 200 feet. Only Alternative 5 was changed to address DOE, RFFO's request with respect to the new assumed areal extent of soil contamination. Therefore, the comparisons of alternatives within the attached Proposed Plan may not be as representative as if all the alternatives had been evaluated assuming the same areal extent of contaminated soil (i.e., 50 feet by 50 feet). We would be happy to discuss this issue and possible solutions with you.
